...increases during the perioperative period.^{20,21} The overall
increases during the perioperative period.^{20,21} The overall
net increase in bound and unbound LA increases toxicity risk.
Furthermore, immature hepatic metabolism directly affects
LA clearance in neonates and infants. Amide LA is metabo-
lized through the cytochrome (CYP) P450 system. CYP3A4
metabolizes lidocaine and bupivacaine and CYP1A2 metabo-
lizes ropivacaine. Intrinsic clearance of bupivacaine is one-
third that of adults at 1 month of age, and two-thirds at age
6 months. CYP1A2 is not fully mature before the age of
